

GO

GoingsOn

Tasks. Email. Calendar. Contacts.
One app. Offline-first. Native.

Everything in one place -- no more juggling 5 apps
Your data stays on your machine -- offline-first with local storage
Native performance -- built with Rust, not Electron
Free during alpha -- no subscriptions, no lock-in
macOS + iOS -- with Windows and Linux support

Alpha Release -- March 2026
goingson.app

Core Features

TASKS Task Management

- Automatic urgency scoring based on priority, due date, and age
- Quick-add with natural language: "Fix bug due:tomorrow +urgent @Project"
- Subtasks, annotations, and milestone tracking
- Recurrence (daily, weekly, monthly) with auto-creation on completion
- Snooze tasks until later today, tomorrow, weekend, or next week
- Bulk operations: complete, snooze, or delete multiple tasks at once
- Saved views and named filters for any combination of criteria

EMAIL Email Integration

- Full IMAP/SMTP client built in -- connect any email account
- OAuth2 for Fastmail, Google, Microsoft, and Yahoo
- Native JMAP protocol support for Fastmail
- Threaded conversations with reader mode (strips HTML clutter)
- Create tasks directly from emails with source linking
- Auto-sync on configurable intervals (5/15/30/60 min)
- Compose, reply, archive, snooze -- all without leaving the app

CALENDAR Calendar & Events

- Create events with title, description, location, and time range
- Link events to projects and contacts
- Recurrence support (daily, weekly, monthly, yearly)
- Time block types: Focus, Personal, Vacation, Free Time
- Event reminders with configurable lead time
- Conflict detection with existing time blocks

CONTACTS Contacts

- Store names, companies, emails, phones, social handles, custom fields
- Full-text search across all contact fields
- Auto-suggest contacts from email senders
- Link contacts to tasks, events, and email threads

Planning & Workflow

PLAN Day Planning & Time Blocking

- Visual hourly timeline for your day
- Drag unscheduled tasks onto the timeline to create time blocks
- Events display alongside tasks on the same timeline
- Current time indicator and day navigation with keyboard shortcuts
- Collapsible sidebar with unscheduled tasks

REVIEW Weekly Review

- Guided review: see what you completed last week
- Set focus tasks and projects for the current week
- Track vacation days with visual banners
- Monday nudge: gentle reminder when review is overdue

Power Features

SEARCH Search & Saved Views

- Full-text search across tasks, projects, emails, and contacts
- Date range syntax: after:, before:, from:, to:
- Save any filter as a named view; pin favorites for quick access

KEYBOARD Keyboard-Driven

- Vim-style navigation (j/k for items, g+key to jump between views)
- Quick-add from anywhere with 'q', shortcuts overlay with '?'
- Native menu bar with standard macOS shortcuts

EXPORT Export & Backup

- Export all data as JSON, tasks as CSV, events as ICS
- Automated daily backups with configurable retention
- Restore from any backup point

THEMES Themes

- 10 built-in themes: Catppuccin, Dracula, Nord, Tokyo Night, and more
- Follow System for automatic light/dark switching

Why GoingsOn?

Most productivity tools are cloud-only, subscription-based, and spread across multiple apps. GoingsOn brings tasks, email, calendar, and contacts into one native application that works offline and keeps your data on your machine.

How it compares:

	GoingsOn	Todoist	Things 3	Fantastical	Spark
Tasks	Yes	Yes	Yes	No	No
Email	Yes	No	No	No	Yes
Calendar	Yes	No	No	Yes	No
Contacts	Yes	No	No	No	No
Weekly Review	Yes	No	No	No	No
Offline-first	Yes	No	Yes	Yes	No
Cross-platform	Yes	Yes	Apple	Apple	Yes
Free option	Yes	Ltd	No	Ltd	Ltd

Pricing

GoingsOn is free during the alpha period. After launch, we plan to offer a one-time purchase model -- no subscriptions. Your data, your app, forever.

Built With

Rust backend (Tauri 2) -- native performance, small binary, low memory

SQLite database -- your data in a single local file

Vanilla JavaScript frontend -- no framework bloat

205+ automated tests across the codebase

Get GoingsOn

macOS

The macOS app will be shared with you directly as a .dmg file. Open the DMG and drag GoingsOn to your Applications folder.

Note: Since the app is not yet on the Mac App Store, macOS may show a security warning on first launch. Right-click the app and choose "Open" to bypass this, or go to System Settings > Privacy & Security and click "Open Anyway".

iOS (via TestFlight)

GoingsOn for iOS is distributed through Apple's TestFlight, which lets you install pre-release apps directly on your iPhone or iPad.

1. Install TestFlight

Download "TestFlight" from the App Store if you don't have it already. It's a free app by Apple.

2. Open the invitation link

You'll receive a TestFlight invitation link (via email or message). Tap the link on your iPhone or iPad.

3. Accept the invitation

The link opens TestFlight. Tap "Accept" to join the GoingsOn beta, then tap "Install" to download the app.

4. Open GoingsOn

Once installed, GoingsOn appears on your home screen like any other app. You can also launch it from inside TestFlight.

5. Updates are automatic

When a new build is available, TestFlight will notify you. Updates install with one tap -- no need to uninstall and reinstall.

Sending Feedback

Your feedback is invaluable during this alpha period. You can:

- Take a screenshot in the app and share it with any notes
- Use TestFlight's built-in feedback tool (shake your iPhone or tap "Send Beta Feedback" in TestFlight)
- Message me directly -- anything from bug reports to feature ideas

Thank you for testing GoingsOn!
